

Model DVG-6 Vacuum Gauge

Specifications

The model DVG-6 is a vacuum instrument that is an ideal replacement for older Hastings Analog meter gauges. Our DVG-6 has the same 4 hole mounting pattern as the Hastings VT-6, so installation is a breeze. This gauge replaces the VT-6, CVT-16 and CV-26.

In addition, this instrument is calibrated under real vacuum against a NIST standard, comes with a Hastings DV-6M tube and is available with 1 or 2 controls. The setpoints are easily set via set screws, and drive relays that are rated for 7 amps and 250VAC.

Besides being a drop in replacement, the DVG-6 offers the advantage of a digital display which eliminates errors from parallax and is easily viewable from across the room. Each gauge is hand calibrated and carries a warranty for 1 year.

Model DVG-6 Base Priced at \$467.50

With available options below-

Additional Options

2C The units listed with Control have the ability to turn on an external device via two SPDT external connections allowing controls to be activated at two vacuum set-points. The relays activate at and remain on below the set-points \$75.00

5V 5 volts linear output over range of gauge \$50.00

Cal Calibration of a Digivac Vacuum gauge against a NIST traceable standard - included on all new gauges \$0.00

DS Digivac software which collects and graphs vacuum data on a PC through RS232 or ethernet communications - requires RS232 or Eth option \$300.00

NISTCal Calibration of a Digivac Vacuum gauge against a NIST traceable standard with data \$190.00

RS232 Enables vacuum measurement to be transmitted to a PC or another RS232 device through a DB9 female interface. Includes 6 foot DB9 male to female serial cable \$75.00
